(54) ABSORBER CIRCUIT

(57)Abstract:

PURPOSE: To ensure reset time by detecting peak voltage of a main switch and varying power consumption of an absorber according to the detected peak voltage.

CONSTITUTION: A switching power source comprises a DC power source 1, a main switch 7, a transformer 8, a rectifying section 9, a smoothing section 10 and a main switch control section 11, and the switching power source feeds power to a load 12. An absorber 13 and a control section 2 constitute an absorber circuit 14. The control section 2 detects peak voltage to be applied onto the main switch 7 and controls power consumption of the absorber 13 according to the detected peak voltage.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
